Hi, I'm going to show how, when creating or editing an existing word tile, you can easily choose an image from the internet. Here we have a word tile water bottle without an image. What I'm going to do is go to edit mode.

I click the blue icon at the top right. I go to start editing. And then I can click here on the three dots of water bottle. What we see then, if we go down a little bit, is that we have an option here to choose from the internet.

What happens is that we can click on that, and then we see that we can enter a search term. Then there are a number of images that match that search term, and then we can also click next or previous. Suppose we don't like the term, then we could, for example, make it water. Then we can search for water.

In this case we really want a water bottle, so let's say we search for a water bottle. Again, then we can simply go to the next one, and then we think: hey, this is a good image. Then we click on it, and then we see that it is actually added directly to the app. Then we just need to save.

Then we can exit edit mode, and then you see that the image has been added.
