Step-by-step instructions

1

Enable edit mode

Open **Settings** and turn on **Edit mode**, then return to the home screen.

2

Open the tile menu

Select the **three dots** on the tile you want to move.

3

Choose Move to other category

In the menu that appears, under **Change position**, select **Move to other category**.

4

Confirm the target category

Navigate to the category where you want to move the tile and press **Move to this category**. The tile is moved to the new category.

I'm going to show you how to move a tile to another category in the app.

To do this, first make sure edit mode is enabled in the settings. Then return to the home screen and select the three dots of the tile you want to move.

In the menu that appears, you'll find the option "move to other category" under the "change position" heading. When you press this, text appears at the bottom of the screen saying "[tile name] move to this category".

Now navigate to the category where you want to move the tile and press the "move to this category" button. The tile will then be moved from the original location to the new category.

This way you can easily organize your tiles and place them in the right categories!
